

Mattress Handling, Packaging and Storage

Dunlop Foams mattresses are intended (designed) for indoor use. Dunlop Foams recommends the transportation of the mattress from one site to another be carried out in an enclosed vehicle positioned upright.

New mattresses are delivered in a clear plastic bag. Care should be taken when moving the mattress as sharp objects such as door handles or furniture may pierce the mattress packaging or mattress cover. The mattress is not supplied in a sterile state and should be stored in an environment free from direct sunlight. Where the mattress is supplied with a zipper cover, do not use the zip cover assembly as a carry handle. Mattress cover handles are available as an option when purchase orders are placed.
